## CYTO PARTNERS WITH ENGINEERING FIRMS ON DOWNTOWN BALTIMORE STUDY

Columbia, Maryland – Cyto Communications, LLC, will support a joint venture engineering team including Hatch Mott McDonald; Hazen and Sawyer, P.C.; and Patton, Harris, Rust & Associates, Inc., which has been selected by the Baltimore City Department of Public Works to conduct a study of a major portion of Baltimore’s waste water system.

The Low Level Collection System and Sewershed Plan will evaluate the system in an area that encompasses the Baltimore City Inner Harbor and downtown business district as well as many City neighborhoods. Cyto will serve as project liaison to area residents and industries.

“This is a major project for the City,” said Cyto managing partner Rich Badmington. “We’re honored to be working with three of the best engineering firms in the region toward long-term improvements in the quality of water in the Chesapeake Bay and the safety of Baltimore residents.”
